

SQL JOIN Essentials

Basic INNER JOIN Syntax

```
SELECT * FROM Orders
INNER JOIN Customers
ON Orders.CustomerID = Customers.CustomerID;
```

Sample Datasets

Table: L_TB				Table: R_TB			
Em_ID	Em_Name	Dep_ID	Salary	Em_ID	Em_Name	Dep_ID	Salary
101	Alice	1	60000	101	Alice	1	60000
102	Bob	2	55000	102	Bob	2	55000
103	Charlie	1	70000	103	Charlie	1	70000
104	David	3	50000	107	Rajesh	3	55000
105	Eva	4	65000	108	Pankaj	4	60000

Core Join Variations

Left Join

```
SELECT * FROM L_TB L
LEFT JOIN R_TB R
ON L.EM_ID = R.EM_ID;
```

Right Join

```
SELECT * FROM L_TB L
RIGHT JOIN R_TB R
ON L.EM_ID = R.EM_ID;
```

Inner Join

```
SELECT * FROM L_TB L
INNER JOIN R_TB R
ON L.EM_ID = R.EM_ID;
```

Full Outer Join Compatibility

```
SELECT * FROM L_TB L
FULL OUTER JOIN R_TB R
  ON L.EM_ID = R.EM_ID;
```

Note: MySQL does **NOT** support FULL OUTER JOIN natively.

Supported Systems: Works in SQL Server, PostgreSQL, and Oracle.

MySQL Workaround (Using UNION)

```
SELECT * FROM L_TB L
LEFT JOIN R_TB R
  ON L.EM_ID = R.EM_ID

UNION

SELECT * FROM L_TB L
RIGHT JOIN R_TB R
  ON L.EM_ID = R.EM_ID;
```
