		Set
Creation	Simple Method	thisSet = {"apple", "banana", "cherry", "orange"}
	by USING Constructor	thisSet = Set(("apple", "banana", "cherry", "orange"))
Access / Slicing Items		You cannot access items in a Set by referring to an index, since Sets are unordered the items has no index. But you can loop through the Set items using a for loop,
Loop Through		#To print all value:- for x in thisSet: print(x) apple banana cherry orange kiwi melon mango
Length		len(abc)
Check if Item Exists		print("banana" in thisSet)
Changing the item		Once a Set is created, you cannot change its items, but you can add new items.
Adding an Item	To add an item at the Last index	thisSet.add("orange")
		thisSet.update(["Litchies", "Kaju", "Angoor"])
	To add an item at the specified index	Since tuple is unidexed hence element can not be added at specific index
Remove	To removes the specified item: To removes the Last item:	thisSet.remove("banana") thisSet.discard("banana") thisSet.pop()
Clear Delete	To empty the Set: To delete the Data Completely	thisSet.clear() del thisSet
Copy		x = fruits.**copy()** print(x)
Join	by + operator Method 01	Set Example abc = {"a", "b" , "c"} xyz = {1, 2, 3} Set can not be joined for x in abc: xyz.**add**(x) print(xyz)
Number of elements in dataSet		---
Index of the first element with the specified value		---
Reverses the order		---
Sorts the Set		---
