

Matplotlib Core Customization Reference

`plt.figure(figsize=(8, 5))`

Initializes figure window and sets physical dimensions.

Figure Canvas (8x5)

`plt.title("Main Title")`

Adds a descriptive header title centered across axes.

Main Title

`plt.xlabel("X Label")`

Assigns a text label to the horizontal X-axis.

X-Axis Label

`plt.ylabel("Y Label")`

Assigns a text label to the vertical Y-axis.

Y-Axis Label

`plt.xticks(rotation=45)`

Customizes tick mark positions, labels, and rotations.

Cat A Cat B

`plt.ylim(ymin, ymax)`

Restricts numerical value boundaries along the Y-axis.

ymax
ymin

`plt.bar_label(container)`

Prints exact numeric values directly on top of bars.

45

69

`plt.legend(loc='upper right')`

Displays a key box identifying data series.

■ Series A

`plt.grid(True, linestyle='--')`

Toggles background coordinate reference grid lines.
